

THE BETTER FLOATING FOUNDATION

LIGHTWEIGHT

18X lighter than cement footings—each BLOCK only weighs 2.16 lbs. Plus, they nest together so that you can transport them easily in any vehicle.

STRONG

Each BLOCK is load rated to support 1800 lbs, making them stronger than cement footings.

SUSTAINABLE

CAMO BLOCK is made from recycled material and can be recycled when it's at the end of its life.

LONG-LASTING DURABILITY

The UV-protected BLOCK comes with a 30-year warranty, will not chip, crack, or corrode, and is vented to prevent water build-up, rot, and mold.

EASY TO INSTALL

No digging or chipping out slots to fit a joist—BLOCKS are simple and fast to place and reposition. You can install them on uneven ground, and the cold-weather-approved BLOCK resists frost heave.

VERSATILE

BLOCK works with 4x4 and 6x6 posts, 2x4, 2x6, or 2x8 wood joists, and 2 in. Metal joists in a variety of projects, including low-profile decks from 5-1/2 in. To 30 in. tall*.

*Floating decks under 30" and smaller than 200 sq ft typically do not require building permits, but always check with your local building code official before starting any building project.

USE BLOCK FOR VARIOUS EXTERIOR PROJECTS

- Rooftop decks
- Landings
- Walkways
- Dog houses
- Sheds
- Floating Decks

CONTRACTOR TESTIMONIALS

- "Could not have been easier"
- "Easier than anything I've used in the past"
- "Just level the ground and lay them down"
