

Enjoy The Silence

Many sounds permeate our everyday lives and we believe that going from floor to floor within your home should not add more noise. A quiet home:

- Provides an opportunity to detach from distractions and find solace in the sounds of nature.
- Is a space where thoughts can slow down, stress can melt away, and a sense of harmony can be embraced.

The diagram features a central ear icon with '10+ HZ' below it, surrounded by concentric circles representing sound levels. The outermost circle is labeled 'CAR HORN 800+ HZ', the middle circle 'WATER TRICKLING 500+ HZ', and the inner circle 'VACUUM CLEANER 400+ HZ'. The central area is labeled 'INFRADRIE TRACTION ELEVATOR'.

Minimal Sound. Up & Down.

Our InfaDrive™ Traction Elevators are engineered to provide peace of mind AND peace and quiet.

Our teams at Residential Elevators have spent almost a decade working to deliver on this dream of an ultra-quiet home elevator. The result of this hard work is now available and is the quietest elevator we have ever tested. These new traction home elevators by Residential Elevators offer a state-of-the-art drive system called

InfraDrive™ that is exceptionally quiet while in operation within your home, going both up and down. **Infr-aDrive™** Traction elevators are designed to place all controls and mechanicals in optimal locations to reduce the already quiet sound of the mechanicals to a whisper both outside and inside of the hoistway.

The quietness offered by these new traction home elevators is truly remarkable. With the **InfraDrive™** drive system, you can glide from one floor to another without any unnecessary noise. This means that you can enjoy the tranquility of your home even while using the elevator.

After almost a decade in the making, the InfraDrive™ Traction Elevator is engineered to be our quietest yet.

OVERHEAD REQUIREMENTS

The **InfraDrive**TM system is known for its compact and efficient design, allowing for more usable space within the home. By reducing the amount of space required for elevator equipment, you can maximize the overall living area of your home. The **InfraDrive**TM hoistway overhead requirements for the top floor are:

- 6'8" Cab Height requires a minimum of 96" from top floor finished flooring to the lowest point of finished hoistway ceiling
- 7'4" Cab Height requires a minimum of 102" from top floor finished flooring to the lowest point of finished hoistway ceiling
- 8'0" Cab Height requires a minimum of 110" from top floor finished flooring to the lowest point of finished hoistway ceiling

When planning your project, your local Residential Elevators representative will help you design the elevator hoistway for optimal performance and utilization of available space.

Our friendly and patient team is here to assist you if you have any questions or concerns about quiet next generation home elevators. Contact us to learn more.
