ALUMINIUM SHUTTERS

OUTDOOR SHADING SOLUTIONS PROVIDER

WWW.SUNLEVER.NET

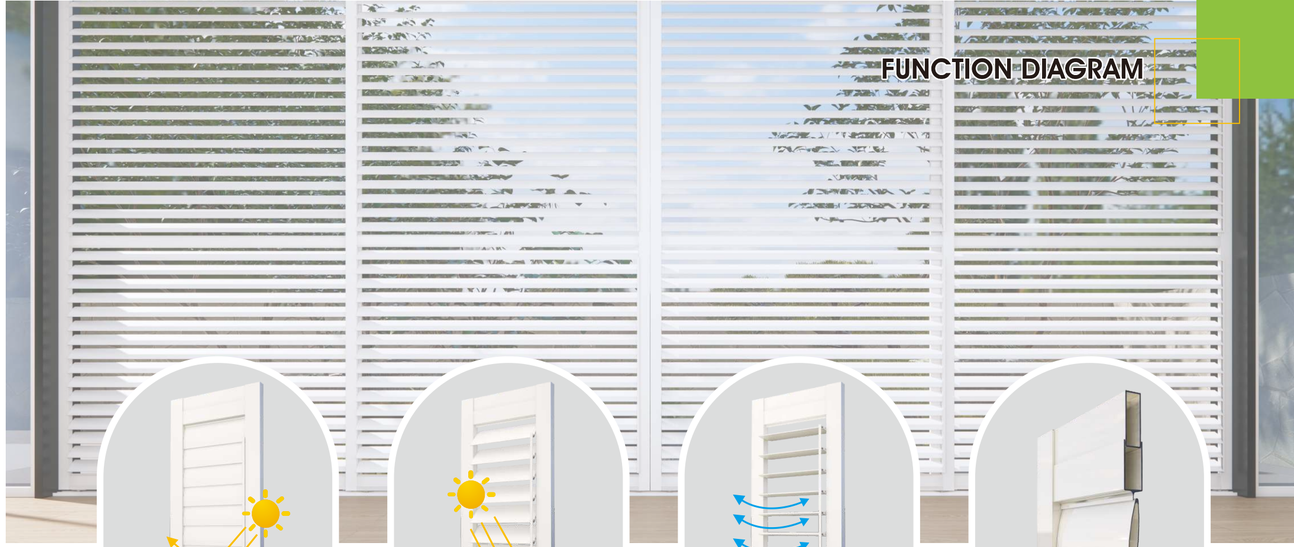
PRODUCT INTRODUCTION

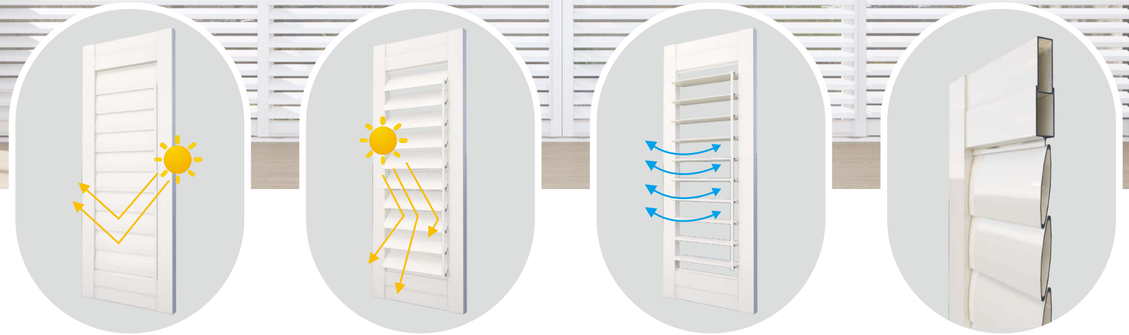
Aluminium shutters are modern indoor and outdoor energy-saving sunshade product that perfectly comebine with practicality, protection and decoration function.

- **Aluminium 6063, a green building material**, which comply with policy of carbon peaking and neutrality , supporting the development of green buildings;
- **Fixed and Operable Blade Options**. Operable blade can provide variable control of light and ventilation. When the blades are openning to 90 degrees, the best ventilation is obtained.
- **The airfoil double-layer blades improve bending strength**, ensuring that the aluminium shutters have little deformation when impacted by external force, and achieve protection function.
- The ratio of visible & direct sunlight transmittance and UV transmittance all are 0.
  Blocks out UV and sunlight transmission.

Sunlever GB/T 2680-2021 test result: the shading coefficient is as low as 0.11, reaching an excellent level 4 (0-0.2).

FUNCTION DIAGRAM





All aluminum alloy 6063 material;
Shading and heat insulation.

Operable blade;
Openning and closing 0°~180°;
Dimming by refraction.

When blades openning to 90°;
Ventilation rate up to 80%;
Create good ventilation condition.

Airfoil double-layer blades;
Made by aluminium 6063 Durable;
Anti collision and theft.

Louvered Pergola

Aluminium louvered pergola matched with aluminium shutters, to create the comprehensive all-weather sunshade leisure space.

Without Shutters
