## REMEDATION BOMB

Superstratum Remediation Bomb is a dry packet that releases controlled amounts of chlorine dioxide gas simply by adding water. Use to eliminate the odors from mold, mildew, smoke, pet urine, cannabis, and other VOCs.

### Controlled-Release Chlorine Dioxide Gas

The properties of chlorine dioxide gas (CLO<sub>2</sub>) against microbial odor was discovered in 1814. However, due to the unstable properties of the gas, there has not been an effective and dependable method to use and store CLO<sub>2</sub>.

Superstratum Remediation Bomb utilizes a brand new patented **controlled-release CLO<sub>2</sub> gas technology**. By simply adding water, the perfect amount of CLO<sub>2</sub> gas is released into an environment to purify the air.

### Use to remove odors caused by:

Smoke | Urine | VOCs | Mold | Mildew | Bacteria

### Additional Uses:

Cars | Boats | Campers | Storage | Freezers | Kitchens

The Superstratum Remediation Bomb is part of the full Superstratum System; a comprehensive solution for eliminating mold and destroying mycotoxins that is water-resistant and guaranteed to last for years.
