

### SJ5800 Silicone Flame Retardant Sealant

#### Product Features:

1. One-component, neutral curing, curing speed, high sealant, medium modulus, high displacement capacity of silicone flame retardant sealant;
2. With excellent weather aging resistance and flame retardant performance, long service life;
3. For most building materials do not need primer that has excellent adhesion.

#### Main Application:

1. All kinds of fireproof doors and Windows bonded seal, curtain wall engineering each layer flame retardant seal;
2. Fixing and flame retardant sealing of electronic and electrical components;
3. All kinds of public places waterproof, moisture-proof, decoration and other flame retardant seal.

### SJ6800 Corner Sealant

#### Product Features:

1. One-component corner glue, free of solvent, isocyanate and PVC;
2. Has good weather resistance and anti-aging ability, can improve the service life of doors and Windows;
3. It has good adhesion to a variety of materials without primer.

#### Main Application:

1. The structural bonding and sealing of the corner of the heat-insulating aluminum alloy doors and Windows of the broken bridge;
2. Structural bonding and sealing of corners of steel-plastic coextruded profile doors and Windows, wood-aluminum composite doors and Windows;
3. Structural bonding and sealing of metal curtain wall doors and Windows.

### SJ600 Neutral Anti-mold Sealant

#### Product Features:

1. One-component, neutral curing, no corrosion, superior performance of kitchen and bath sealant;
2. Suitable for kitchen and bathroom. The bathroom is usually small and the environment is humid, soap bubbles and other easy to breed mold, and anti-mold sealant especially contains fungicide, which has a good effect on inhibiting the growth of bacteria;
3. Freeze food and seal it waterproof, moisture-proof and mildew proof.

#### Main Application:

1. Installation of various kitchen utensils and sanitary ware and waterproof and mildew proof seal;
2. Marble (granite), glass, aluminum plate caulking seal;
3. All kinds of Windows and doors glass installation.

### SJ8899 Two-component Neutral Silicone Structural Sealant

#### Product Features:

1. Two-component, neutral curing, high adhesion, high flexibility, high modulus of building structure with silicone sealant;
2. When used, the A and B components are mixed according to the specified proportion, and the reaction is cured into an elastomer with cold resistance, heat resistance (little change in performance within the range of -40°C-150°C) and no corrosion;
3. It has good weather resistance such as ozone resistance and ultraviolet resistance, giving it a long service life.

#### Main Application:

1. Various structural bonding, including: glass, stone, aluminum curtain wall, glass lighting roof and metal structure engineering;
2. Second pass bonding seal of insulating glass;
3. Many other construction and industrial uses.

### TIME PRODUCTS

### SJ8866 Two-component Neutral Silicone Insulating Glass Sealant

#### Product Features:

1. Two-component neutral silicone insulating glass adhesive is a neutral curing silicone sealant specially designed for insulating glass assembly;
2. The formula design of the product makes it have high modulus, high strength and other properties to meet the requirements of insulating glass assembly;
3. When used, use a special two-component glue machine construction, its curing speed is adjustable, deep curing fast, suitable for factory construction, non-corrosive to metal, coated glass, concrete, marble, granite and other building materials.

#### Main Application:

1. Insulating glass non-structural second pass bond seal, other uses.

## COMPANY PROFILE

ZHEJIANG TIME NEW MATERIAL CO., LTD. was founded in 2005, located in Linhai, China, the production base covers an area of 100 acres, mainly engaged in the door and window curtain wall silicone sealant, MS (modified silane) sealant and other building materials research and development, production, sales and service. As a national high-tech enterprise, the national silicone structural adhesive production enterprise, Taizhou Green Factory, with domestic advanced fully automated production lines, digital information control equipment, rigorous production management system. "TIME" brand was rated as a famous trademark in Zhejiang Province, top ten brands of building SILICONE SEALANT in the door and window curtain wall industry, and TOP500 preferred suppliers of China's Real Estate, and many of its products won the Samsung certification of China's green building materials products. At the same time, the company also has a number of invention patents, and with the chemical engineering and biological engineering College of Zhejiang University reached production, education, research cooperation, the establishment of graduate practice base.

## TIME HONOR

## TIME PRODUCTS

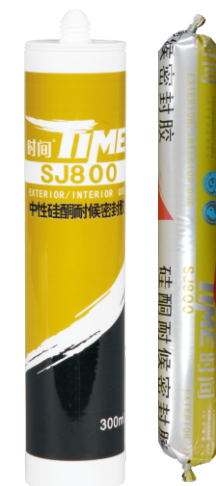

### SJ900 Silicone Structural Sealant

**Product Features:**

One-component, neutral curing silicone structural sealant. At normal temperature and the water in the air contact chemical reaction curing into an elastic structural binder, especially suitable for structural assembly curtain wall engineering.

**Main Application:**

Widely used in glass, stone (marble, granite), aluminum curtain wall and glass lighting roof and metal structure engineering structural bonding and sealing.

### SJ800 Silicone Weather-proof Sealant

**Product Features:**

The utility model relates to one-component, neutral curing silicone sealant, which has excellent ozone resistance and ultraviolet aging resistance. It has good adhesion to most building materials without primer, reacts with water in the air at room temperature, and solidifies into an elastomer with good resistance to displacement (±35%).

**Main Application:**

Mainly used for weather-proof and water-proof sealing of the joints between plates in the building curtain wall. Suitable for glass curtain wall and metal plate curtain wall.

### SJ700 Stone Silicone Sealant

**Product Features:**

The utility model relates to one-component, neutral, room temperature curing sealant. It can be extruded from -5°C to 40°C. It is pollution-free to porous building materials such as stone, ceramic and cement components, and has excellent bonding properties and excellent weather-aging resistance. Non-corrosive to stone, cement and other building materials.

**Main Application:**

Mainly used for dry hanging marble, granite curtain wall engineering and cement prefabrication engineering joint sealing.

### SJ1800 Silicone Weather-proof Sealant

**Product Features:**

One-component, medium modulus, neutral silicone sealant cured in the presence of moisture. It has ultraviolet resistance, ozone resistance and weathering resistance, and has excellent adhesion to most building materials. Excellent thixotropy and extrudability, and has good compatibility with neutral silicone adhesive and structural adhesive.

**Main Application:**

Mainly used for sealing the joints between building doors and Windows, glass and window frames, window frames and building openings, and weatherproof and waterproof sealing of the joints between plates in the curtain wall. Suitable for glass curtain wall and metal plate curtain wall.

### SJ3800 Universal Neutral Silicone Sealant

**Product Features:**

One-component, medium modulus, neutral silicone sealant cured in the presence of moisture. It has ultraviolet resistance, ozone resistance and weathering resistance, and has excellent adhesion to most building materials. Excellent thixotropy and extrudability, and has good compatibility with neutral silicone adhesive and structural adhesive.

**Main Application:**

Mainly used for sealing the joints between building doors and Windows, glass and window frames, and window frames and building openings.
