

Presents **myHome**

The most innovative moisture control ventilation system ever!

Proprietary patented software continually monitors temperature, relative humidity, and dew point trends, automatically exhausts any excess moisture above the level you set, then continues on ventilation mode and never stops venting indoor air contaminants and odors to the outside.

Basement Model HCS-BS **myHome**

Quiet year-round ventilation for basements up to 2,400 square feet
Floor-to-ceiling model is adjustable in height, can also be cut down to 62" or extended to 120"

Duct Size: 6" Height: 86.5-96" Width: 11.5" Depth: 8.5"

34W, 0.30A, 115V plug-in

Programmable Airflow: from 35 to 230 CFM

Slim profile with internal sensor that monitors basement conditions
Wireless controller is placed on the main floor so its sensor can read ambient conditions
Data supplied by both sensors directs airflow output for maximum efficiency
A correctly-sized myHome system, installed in the basement, services the whole house!

What satisfied customers are happy about...

"No water to empty!" D. Le Blanc

"For the first time in 14 years, our home smells fresh & clean." M. MacDonald

"In just two days our apartment windows were completely dry." B. Jaffer

"I waited a few days and just completed another Radon test and am pleased to inform you that the reading was reduced by more than half." G. Autore

"My home is quite airtight and the HRV was not doing the job, but now with myHome installed in the crawlspace, my bedroom walls no longer have mold." M. Cheung

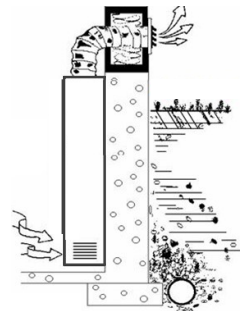

...and what happy contractors say...

"Sit the unit close to the floor, vent out at the top, and voilà – air exchange without all the ductwork and expense. Saves on their electric bills and prevents moldy construction material & household goods from going to the landfill, so I tell my customers to think of it as a Green Machine!"

What we like about myHome

- we really like to hear customers say "It's so energy efficient! I saved \$50 a month using myHome instead of my old dehumidifier."
- you can manually change settings on your remote control, or change them wirelessly using a mobile app on your smart phone, and then receive updates about your IAQ whether you are at home or away
- has a built-in CO sensor which monitors, controls, and expels dangerous carbon monoxide emissions, automatically

Vented above-ground either through the top (shown) or at the back
