

INTRODUCING THE VENT OUT™

Designed to make installation of vents to ducts watertight, easier & secure.

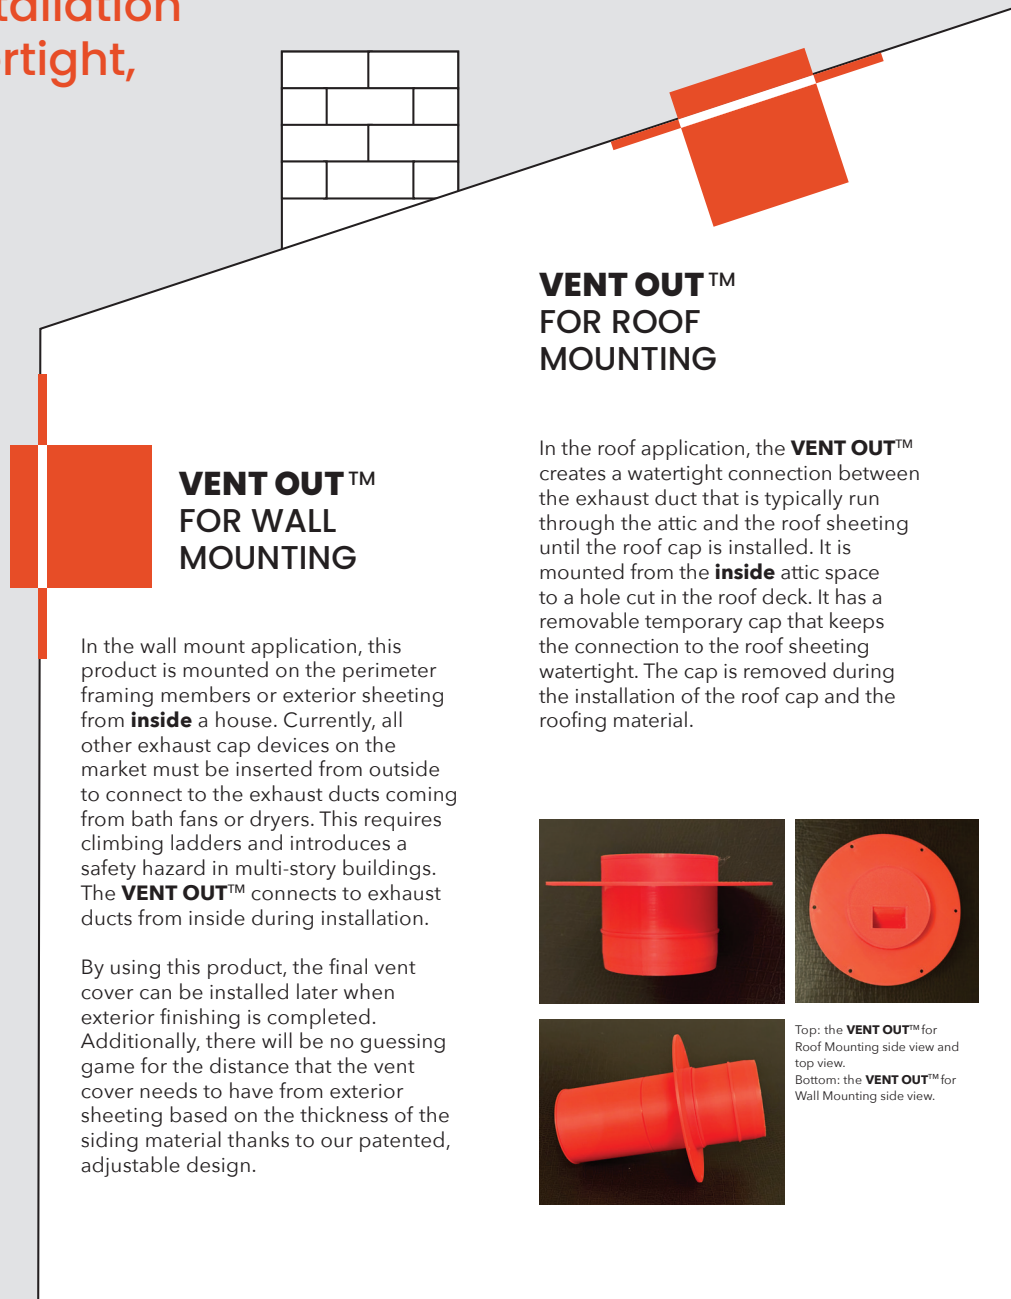

The **VENT OUT™** is a revolutionary product. It is the missing link to connect exhaust ducts through the roof and exterior walls of a structure like a house.

There is no other product on the market currently that creates a watertight connection between the exhaust duct and the roof deck or exterior wall.

Key benefits are:

- **Quick & easy to install**
- **Prevents water damage from rain**
- **Keeps workers safe**
- **Saves on labor costs**
- **No repeat visits to the job site needed**
- **Saves hundreds of dollars per house**
- **Accepts round flexible or metal ducts**
- **No need to climb ladders for install**
- **Adjustable to various exterior products**
- **Used for venting in roof & wall**
- **Fits round duct sizes 4", 6", 8" & 10"**

Patent numbers 11,536,486 and D941,456.
The **VENT OUT™** is the registered trademark of ZOOR, LLC.

VENT OUT™ FOR WALL MOUNTING

In the wall mount application, this product is mounted on the perimeter framing members or exterior sheeting from **inside** a house. Currently, all other exhaust cap devices on the market must be inserted from outside to connect to the exhaust ducts coming from bath fans or dryers. This requires climbing ladders and introduces a safety hazard in multi-story buildings. The **VENT OUT™** connects to exhaust ducts from inside during installation.

By using this product, the final vent cover can be installed later when exterior finishing is completed. Additionally, there will be no guessing game for the distance that the vent cover needs to have from exterior sheeting based on the thickness of the siding material thanks to our patented, adjustable design.

VENT OUT™ FOR ROOF MOUNTING

In the roof application, the **VENT OUT™** creates a watertight connection between the exhaust duct that is typically run through the attic and the roof sheeting until the roof cap is installed. It is mounted from the **inside** attic space to a hole cut in the roof deck. It has a removable temporary cap that keeps the connection to the roof sheeting watertight. The cap is removed during the installation of the roof cap and the roofing material.
