

## Landstar Homes Heats up Oklahoma

Mark Systems is proud to announce the upcoming installation of IHMS home builder software at Landstar Homes, based in Tulsa, Oklahoma.

Landstar Homes is a relatively young company operating under the direction of President Bill McCollough, who has many years of building experience from playing pivotal roles at larger builders throughout Oklahoma. Due to their expected increase in size and production, McCollough decided to abandon QuickBooks for IHMS integrated home builder software to increase communication and increase efficiency.

Many members of the Landstar team have experience working with other home builder software products and knew they needed a fully integrated accounting module built in; real time web portals to connect trade partners and superintendents, as well as involve customers in the build process. The only system that can completely integrate Accounting, Sales & Design, Purchasing, and Scheduling while sharing real time information with workers in the field is IHMS home builder software.

Landstar Homes will finish out 2014 with approximately 60 single-family, detached, move-up homes built in 12 communities throughout Tulsa and Oklahoma City. They expect to double in size and production next year as they continue to branch out into new areas of Oklahoma.

### About Mark Systems

Established in 1981, Mark Systems has been developing enterprise home builder software for over 30 years.

Offering support for every home building activity, IHMS delivers full back-office and field operations functions directly to the desktop of every person in the building process.

Mark Systems' single database architecture means that residential construction information is delivered instantly and transparently to every team member. Accounting, Purchasing, scheduling, field operations, trade partners, sales office, and design center personnel all effortlessly share critical information.
