AirCycler debuts IAQ sensor-based ventilation system designed for builders and homeowners

Las Vegas, February 27, 2024 – AirCycler, a leading residential ventilation control manufacturer for over 20 years, together with Awair, the leader in residential and commercial indoor air quality monitoring, is excited to debut their revolutionary indoor air quality partnership with the CONNECT Responsive Ventilation System at the 2024 International Builder’s Show in Las Vegas. Aimed at meeting the demand for healthy homes with automatic, air quality data-driven ventilation and maximum efficiency for builders and installers, the CONNECT system represents the future of industry-standard air quality monitoring and ventilation for the residential market.

“Offering a home with an efficient, seamlessly integrated fresh air system is one important way to bring customers peace of mind and compete in today’s competitive housing market” says AirCycler President Jason Wolfson. Together AirCycler and Awair are helping builders and contractors deliver with the CONNECT System. The system offers the smart features that builders expect from smart ventilation – indoor and outdoor air quality monitoring, automatic ventilation response to poor-air quality events, airflow monitoring to ensure proper system operation, and easy installation.

Additional features exclusive to the CONNECT System allow installers and builders to deliver and maintain a ventilation system with cutting-edge efficiency – AirCycler’s CONNECT dashboard allows companies of any size to access a proprietary dashboard for monitoring and troubleshooting installed systems remotely, access to pre-saved system configurations for fast installation and programming on-site, and options for plug-n-play installs that don’t require the use of a mobile app. A whole house ventilation and air quality monitoring system designed to work with standard ductwork and HVAC equipment, CONNECT and Awair devices look and operate as automatically and discreetly as everyday heating and cooling systems.

Jason Wolfson, President, AirCycler

“AirCycler has been a leading ventilation controls manufacturer in the industry for over two decades. In developing the CONNECT System it was our goal to provide a residential ventilation option that delivers good air quality efficiently and effectively. It stands apart from other ventilation systems on the market – it doesn’t require dedicated ductwork, costly equipment or regular maintenance to ensure adequate operation or maintain code-required ventilation. For builders and installers; happy homeowners, easy and efficient installation and remote troubleshooting capabilities means valuable time saved. And it’s so simple. We think the only question homeowners will ask is ‘why do I feel so good?’”

Visit AirCycler and Awair team members at Booth C3164 at the International Builders’ Show February 27-29, 2024 in Las Vegas. The CONNECT System will also be on display in the show’s New Product Zone in Central Hall.
