

FEB 2024 PRESS RELEASE

The **VENT OUT™** is a revolutionary patented product designed to securely connect exhaust ducts to either the exterior wall or roof of a structure, like a house. There is no other product on the market currently that creates a watertight seal during construction. The **VENT OUT™** is quick and easy to install and comes in multiple sizes to fit 4", 6", 8" & 10" flexible ducts. We will introduce this product to the market at the 2024 NAHB International Builders' Show® in Las Vegas, NV February 27-29, 2024.

In addition to saving on time and labor costs, the key feature in the **VENT OUT™ for Roof** is the removable cap that prevents water damage to the insulation around the flexible duct and the wood of the structure. The key feature that makes the **VENT OUT™ for Wall** so beneficial is the adjustability making it compatible with various exterior siding products to work on most any structure. To learn more about our products, or to watch our installation videos, visit us online at theVENTOUT.com. For inquiries, please contact Alan@theVENTOUT.com.
