

PRESS RELEASE

Muddskip's Revolutionary Drywall Additive....the NextGen Wall Coating developed to transform the way walls are finished is launching at the International Builder's Show in Las Vegas February 27-29th. Drywall mud manufacturers have been trying to figure out how to reduce labor time, sanding mess while improving the hardness of the finish without any shrinking, bubbles or flashing issues, Muddskip's Trademarked, Patent Pending proprietary formula is the answer! Revolutionizing the drywall industry. Muddskip can be added to any existing drywall setting compound whether dry mix or premixed joint compound, the result is a drywall mud that can be used to tape and bed seams, float the walls and finish all in the same day with no bonder and no sanding between coats. This mud can be applied to raw Drywall board as well as many other substrates with no bonder. The purpose of Muddskip's drywall additive is to reduce labor time by more than 50% thru ease of application, (as easy as rolling on wall or trowelling), the ability to apply multiple wet on wet coats in same day and no sanding between coats as you would typically have to do with traditional drywall joint and setting compounds is a game changer in the industry. Less windshield time, no more bubbles, less time on wall resulting in a harder stronger finish.

The use of Muddskip's additive transforms traditional drywall products into a NextGen wall finish by making the mud more pliable, easier to apply as easy as using a paint roller, blade or trowel to apply. The setup time is still consistent with regular compounds the difference is you can apply additional coats when dry to touch, (you don't have to wait for it to dry completely) layering coats as needed to obtain desired finish in same day. Traditional drywall compounds without the additive would require drying overnight, sanding smooth, then applying another coat, repeating this process until desired finish is obtained. The fact there is no need for sanding and you are able to achieve desired finish in a fraction of the time reduces labor time and cost dramatically. Additionally the finish is harder with no shrinkage, we recommend for new drywall applications you use the Muddskip Heavy Duty for tape and bedding seams then base coat to desired texture, all 3 steps complete with ONE PRODUCT in a fraction of the time. Should you desire a smooth finish up to level 5 by industry standards we recommend using Muddskip's 3 in 1 Smooth Finish additive into the drywall joint compound and wet trowel smooth. (Skilled finishers can acheive this with the Heavy Duty formula)

By reducing time on job over several days, reducing labor, using less product overall (no sanding) dramatically increases profits for contractor, reduces the mess for homeowners with no sanding required while providing a stronger wall finish for long term wear. Muddskip is undergoing fire testing as well to support the added fire retardancy qualities the formula supports. See applications and fire test at our YouTube Channel:

REVOLUTIONARY!

Muddskip
Revolutionary Wall Finish

One Product
Saves Time
Saves Money
Minimizes Sanding
Same Day Finish

Muddskip
Heavy Duty 3 in 1
Use for SEAMS - BASE Coat - FINISH Coat

Muddskip
3 in 1 Level 5 Smooth
Use for SEAMS - BASE Coat - FINISH Coat

Muddskip
Heavy Duty 3 in 1
Use for SEAMS - BASE Coat - FINISH Coat

Muddskip
3 in 1 Level 5 Smooth
Use for SEAMS - BASE Coat - FINISH Coat
